

ABSTRACT

A combination solid material storage container and applicator assembly for solid materials, such as surf board wax, is disclosed. The assembly includes a symmetrical storage container member, which has an open top end, an open bottom end, and an interior surface. A pusher member is positioned inside the container member and includes a sealing lip portion, which provides a continuous seal between the pusher member and the container member interior surface. The pusher member supports a slug of solid material within the container member. An applicator cap member is releasably secured to the open top end of the container member. The cap member includes a blade portion with a scraper edge and a comb edge. The blade portion is used for manipulating the solid material once applied to a surface.
